Name of Game	Ikou
Idea	Quest based app where users go through Japanese lessons to earn points to use towards their journey. Users will journey through islands on a boat and learn beginner Japanese. Each island will be covering a different basic grammar.
Color Scheme	Most of the app should be blue (to go along with the theme of boats and water) Islands-green (because duh also need something to make it identifiably different from water)
Before the Islands	Character is swimming through sea of letters/basic vocab to get to the first island
Islands	1- alphabet (hiragana, katakana, kanji) 2- ko, so, a, do 3- grammar (particles, は・が) 4- basic phrases 5- final boss stage (per Shuto request :))
After Islands	**???**
Other	blah

What I mapped so far: this is old one…scroll down

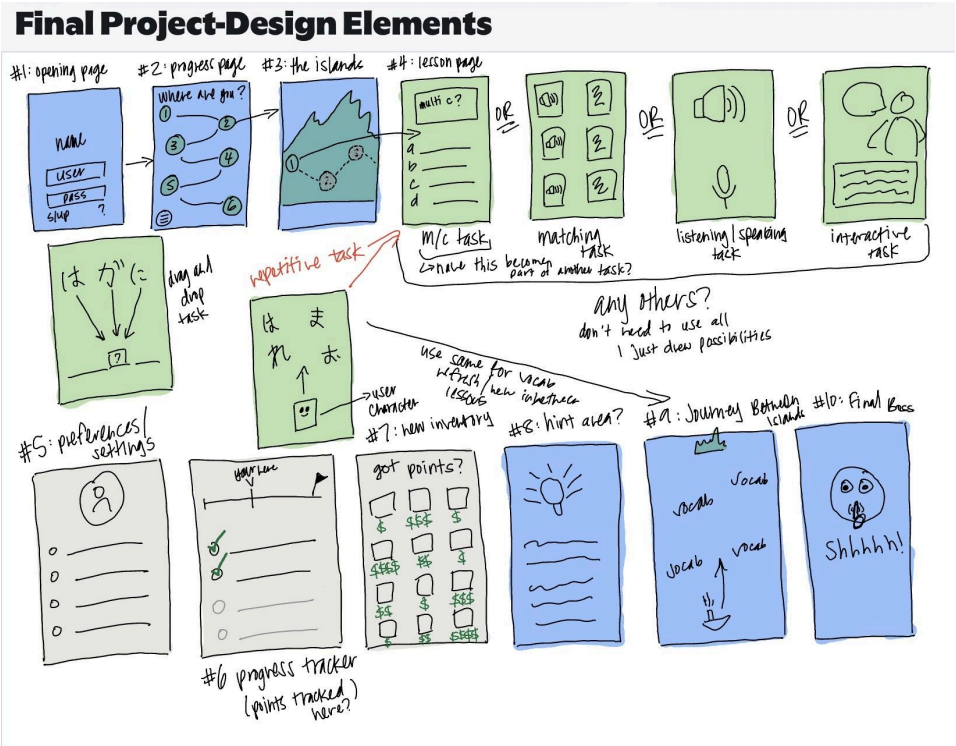

Lesson Tasks	
Repetitive Task - Gonna use it for Alphabet(island 1) and Vocab - **Gamification** - Health bar that declines when letters are guessed incorrectly to make the task game-like. Feedback is explicit, a sound indicates an incorrect answer. - **Scaffolding** - Starts off easy and then gets harder as you continue going on.	- Vocab will use the same game but will be accomplished in between lessons. - Mix of old and new vocab - Purpose is to get them to recognize the vocab over time (Spaced Repetition) - Users can also earn points through this game to add to their Boat Inventory
Multiple Choice Task - Use this for grammar section (particles) (island 3) - Combine with **block blast** - **ISLA Focus on Form** -	- Give users a sentence with a blank particle missing - Give options for them to choose from - There should probably be a page that gives an overview of how to use the particles correctly

Listening Mix and Match Task - Use for ko, so, a, do (island 2) - Also an idea to use it for basic phrases (island 4) - **Talk to NPC's** about items and have the character move directionally to learn first hand about ko, so, a ,do. - **MALL P1, P6, P7, P8** - **TBLT** - **Focus on Form** - **Provide corrective feedback** - **Storytelling**	- Get real input from listening to how it is said - Match what is said to the correct picture
Interactive Task - Would be good to use this in basic phrases (Island 4) - Also good for ko, so, a, do (island 2) - Review task for the end of the lesson - **TBLT?** - **ISLA P8**	- Make a character on the island that talks to users - Have them answer with speaking or fill in the blank or multiple choice? - For ko so a do have the character ask about an object and have the user answer by choosing the correct form
Picture Mix and Match - Use for kanji and include the pictorials - Taking into account **learner differences** - Not everyone learns through just repetition when it comes to letters - But it is good to make kanji fun to learn - **ISLA 9** - **MALL 5**  	- Match the correct kanji form to its corresponding picture - We just doing basic kanji so this should be fairly good with the mix and match - Kanji is hard so ensuring that the user is engaged but also correlating them with something will make the concept more fun and enjoyable. (gamification)

Drag and Drop Task - Use for particles (island 3) - Drag the particle into the ship - Cargo box->sentence (fill in the blank) - Throw the box in the ship, if you get the correct particle - **Explicit feedback** - **Storytelling** - **TBLT**	- Users will need to pick the correct particle that fits in the sentence - We should have all the particle they learned in an area - They then choose it in order to win points
Karuta - Listening task - Wack-a-mole game	- Need to listen to sentence - All cards with letters/verb on the table - Pick the card of the correct first letter or pick the correct verb

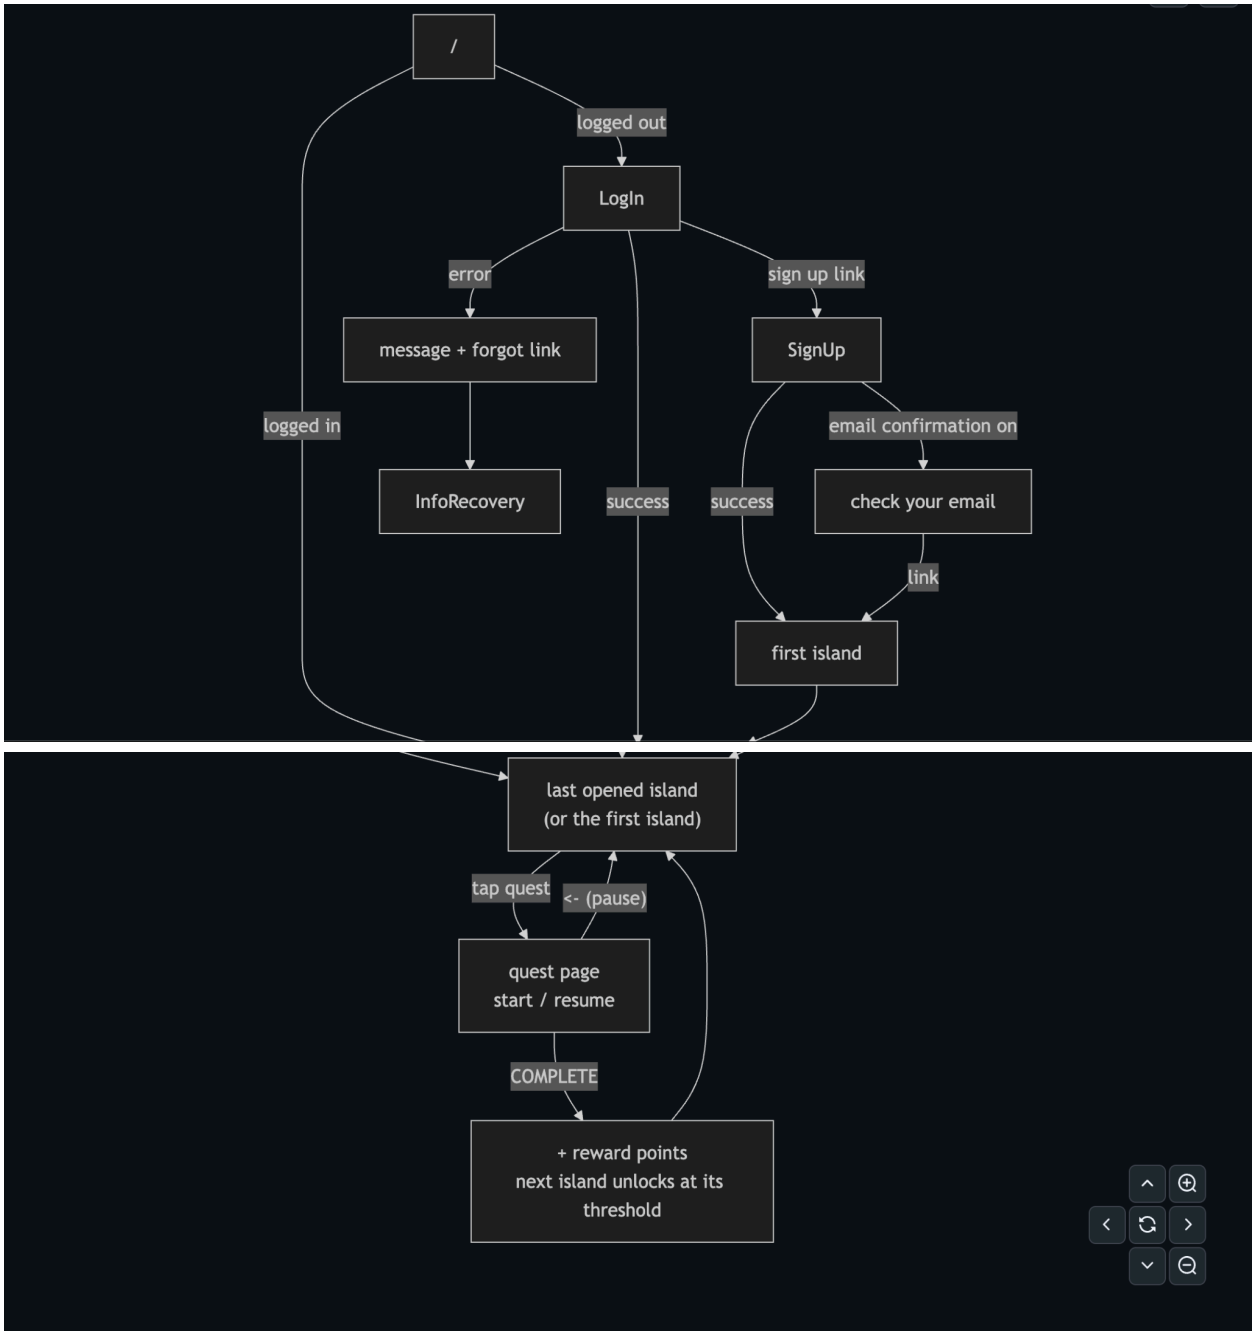

Island Themes/details	
1. Letters	- The game that was coded already is good - I think we should come up with a theme for the island that makes this game more fun and immersive - The little character reminds me of space invaders - Could we do something where the island is very rocky so in order to protect their boat they need to shoot the correct rocks??? - Users would get the repetition and it would be fun for them.
2. Ko, so, a, do	- This island should be very open and grassy - It will be good to have interactive task here - Users can see first hand what is close to them, close to the listener and far from both - Ex: have an object close to the user (ko), then make it close to the game character (so), then make it far into the distance (a). - The user can play around with it->will help them with active recall later (the

	distance/actions will help) - Maybe on this island users can build things and make simple
3. Particles a. に,で、	- I think it would be good if this island has a lot of trees (food, wood, other supplies) - Users can earn supplies by choosing the correct particles - If they get it correct then they get to take the item with them - If they don't they need to put it back. - Ex: users have three pieces of wood in front of them…each with a different particle, they choose the wood piece that they think is correct and they can take that supply item with them.
4. Basic phrases and sentence structure a. は/が structure	- This island centers around an interactive task - Maybe make this island theme based around a port town - User can interact with character programmed to speak with simple phrases that they have learned - Give the user the opportunity to choose how to respond. - Give the user multiple choices to choose from and the character choices can change from there.
5. Final boss	- Needs further discussing

This is the new one…

Moodboard	- Mindcraft (ocean and the blue) - Lava? - Good to use for inspo - Pixelated characters - And basic biomes - Space invaders - Fun game inspo - Stardew valley - Similar top down view, very pixelated - Use for inspo when it comes to trees - Pacman - Game inspo, could be kinda fun - Color scheme of animal crossing - Simple and pastel - Use for maybe characters???
